There When You Need Us

Leading Edge Medical Services (LEMS) is a progressive and reliable industrial medical services company devoted to meeting the needs of industrial and construction based businesses.

LEMS puts the client first. Anywhere, anytime, Leading Edge Medical Services can be on site to provide you with state of the art equipment and supplies, a superior level of patient care, and unmatched professionalism.

LEMS management, lead by CEO Rob Hastie, has a combined 18+ years of emergency medical (EMS) and industrial medical service. Our level of experience gives you a management team willing and able to adapt to your company's specific medical needs.

LEMS believes strongly in continuing education and training so our EMRs, EMTs, and Paramedics are prepared for any emergency they may face.

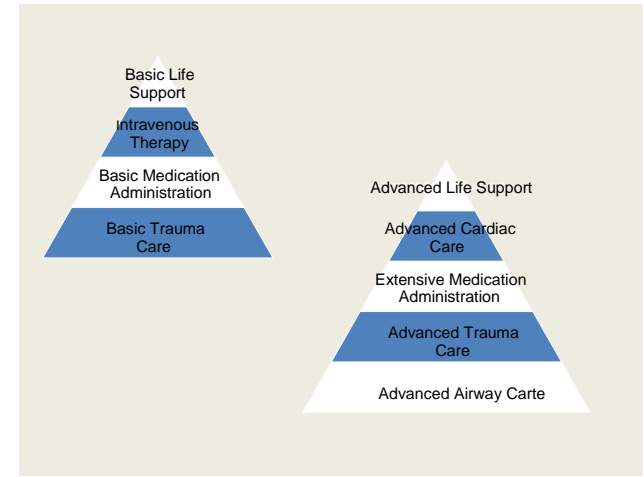

Anywhere your work takes you, LEMS can be there!

Our Equipment and Staff

LEMS operates 1 ton 4x4 mobile treatment centers (MTCs). Our units are stocked with all the emergency equipment you would see in an urban ambulance.

Our staff members are licensed by the Alberta College of Paramedics. In addition to ACP registration, our staff are also certified in H2S alive, WHMIS, TDG, basic cardiac life support, and international trauma life support (ITLS).

First Aid vs. Pre-Hospital Care

In remote areas when someone is seriously sick or injured, first aid is an important first step in ongoing medical care. However, when the injury or illness exceeds the limitations of the aid being provided, receiving professional medical help can be vital to a patient's survival.

Our EMRs, EMTs and Paramedics can provide life saving procedures and medications normally done by responding ambulance personnel. Procedures such as oxygen therapy, intravenous therapy, cardiac monitoring, early cardiac care and airway control can all be done on site by LEMS staff.
